

Version History

[v1.10.0] - Single Active Sessions, Presence Optimization & Stability

1. Concurrent Session Management (Single Active Session)
Commit Message: single active session per user
Detailed Edits:
Added (Backend): Expanded prisma/schema.prisma to track an active sessionId.
Upgraded auth.service.js, auth.middleware.js, and socketServer.js to strictly enforce a "one session per user" rule.
Changed (Integration): Updated AuthContext.tsx and realtimeService.js to actively listen for session collisions via WebSockets. If a user logs into the system from a new device, their previous session on the older device is now instantly and forcefully logged out.
2. Intermittent Online Status Fix (Presence Engine)
Commit Message: Fix Intermittent Online Status Bug
Detailed Edits:
Added: Introduced LIVE_SERVER_UPDATE_GUIDE.md (78 lines) to document the new presence architecture.
Changed (Frontend): Removed the localized usePresence.ts hook and replaced it with a globally scoped PresenceContext.tsx. By wrapping App.tsx in this new context, the system no longer suffers from intermittent WebSocket disconnects or flashing "offline" statuses when users rapidly navigate between pages.
3. Date Parsing on Excel Imports
Commit Message: fixed date hired and birthday not reflecting when importing
Detailed Edits:
Fixed: Adjusted employeeImport.service.js (adding 20 lines) to fix a bug where specific Excel date formats (e.g., MM/DD/YYYY vs DD/MM/YYYY) for Birthdays and Date Hired were failing to map correctly into the Prisma database.
4. Docker Restart Policies & Proxy Trusts
Commit Messages: trust proxy to 1 / changed frontend and backend to always restart... (Merge PRs #207, #208)
Detailed Edits:
Fixed (Backend): Instructed the Express app.js to trust proxy 1, ensuring that IP rate-limiting functions flawlessly behind the new Nginx layer introduced in v1.9.0.
Changed (DevOps): Updated docker-compose.yml to apply strict restart: always policies, ensuring the containers automatically recover if the host server reboots.

[v1.9.0] - VAPT Security Hardening, Export Expansions & Import Templates

1. VAPT Security Hardening (CSP & HSTS)
Commit Messages: Fix VAPT security header vulnerabilities... / Switch to production

builds and apply strict security headers / chore: update helmet CSP

Detailed Edits:

Changed (Backend): Upgraded app.js to implement rigorous helmet configurations, injecting strict Content Security Policy (CSP) and HTTP Strict Transport Security (HSTS) headers across all API responses.

Changed (Frontend/DevOps): Overhauled nginx.conf, vite.config.ts, and docker-compose.yml to block Clickjacking and Cross-Site Scripting (XSS) vectors.

Fixed: Extracted a raw inline script from index.html into an external public/theme-init.js file to comply with strict CSP hash requirements without breaking the Dark Mode initialization.

2. Export Pipeline Enhancements

Commit Message: updated export download cards fields

Detailed Edits:

Changed: Massively upgraded Reports.tsx (modifying over 210 lines) and installed new dependencies via package-lock.json. The Data Export UI was expanded to allow HR to generate much richer Excel/CSV payload formats.

3. Department Code Ingestion Fixes

Commit Messages: fix department code from 1 to 4 max... / fix department card only reflecting 1character (Merge PR #206)

Detailed Edits:

Fixed (Backend): Adjusted employeeImport.model.js, employeeImport.service.js, and account.validator.js to allow department classification codes up to 4 characters long (previously constrained to 1).

Fixed (Frontend): Updated EmployeeImportReview.tsx (adding 60 lines) and employeeIdentity.js to accurately map these longer department codes during the Excel preview stage.

4. Downloadable Import Templates

Commit Message: added a downloadable template that can be use for records importing (Merge PR #205)

Detailed Edits:

Added: Upgraded Directory.tsx (adding 100+ lines) to include a "Download Template" button. This dynamically generates a blank, perfectly formatted .xlsx template file for HR administrators to use, significantly reducing data ingestion errors.

5. Docker Dependency Chaining

Commit Message: Fix backend depending on db container to prevent 502

Detailed Edits:

Fixed: Adjusted docker-compose.yml and the Dockerfile to strictly enforce startup conditions (e.g., waiting for the database to initialize and ensuring prisma generate runs) before the Node backend spins up, preventing 502 Bad Gateway errors during cold restarts.

1. Global FAQ & Help System
Commit Message: Updates from lyndon (Merge PR #196)
Detailed Edits:
Added (Frontend): Created a massive interactive Help system (adding over 300 lines). Introduced FAQ.tsx, FloatingFAQButton.tsx, FAQAccordion.tsx, and FAQSidebar.tsx.
Changed: Injected the FloatingFAQButton globally, allowing users to pull up contextual documentation and support anywhere in the application.
2. React Error Boundaries (Crash Protection)
Commit Message: Updates from teten (Merge PR #195)
Detailed Edits:
Added: Introduced src/components/ErrorBoundary.tsx.
Changed: Wrapped the main application components within this boundary so that if an individual React component fails to render (e.g., due to a malformed API payload), the entire dashboard will no longer white-screen. Instead, a graceful fallback UI is presented.
3. SetupPassword Routing & Dark Mode Bleed
Commit Messages: Fix SetupPassword React Router error / fix dark mode bleeding in the page (Merge PRs #199, #201)
Detailed Edits:
Fixed: Adjusted App.tsx routing logic. Previously, unauthenticated users clicking an email setup link were getting stuck in infinite redirect loops.
Fixed: Updated SetupPassword.tsx to patch a CSS bug where dark mode background colors were "bleeding" outside of their designated containers during the authentication flow.
4. Delete Modal & Audit Log Expansion
Commit Messages: Delete icon on profile / Update for Audit logs and Delete modal (Merge PRs #200)
Detailed Edits:
Added (Frontend): Placed a protected "Delete" icon inside EmployeeProfile.tsx (modifying nearly 100 lines) with a confirmation modal, streamlining the hard-delete process for Super Admins.
Added (Backend): Expanded user.service.js (adding 70 lines) and settings.service.js to aggressively log these hard-deletes and configuration changes directly into the system's persistent Audit Logs.
5. Automated Notification Triggers
Commit Message: Updates from Lyndon
Detailed Edits:
Changed (Backend): Expanded notification.model.js, notification.service.js, and employee.service.js (modifying over 200 lines combined) to automatically broadcast alerts to HR when specific lifecycle events occur, such as an employee's status changing to "Separated."

1. User Password Setup Flow

Commit Message: Added User Password Setup

Detailed Edits:

Added (Architecture): Created PASSWORD_SETUP_DOCUMENTATION.md to document the new authentication pipelines.

Changed (Backend): Rewrote the user registration logic inside auth.controller.js and auth.service.js. Instead of accepting raw passwords during account creation, the system now uses email.service.js to dispatch secure, time-sensitive setup tokens directly to the user's inbox.

Changed (Frontend): Removed over 100 lines of manual password inputs from RegisterForm.tsx. Created a massive new SetupPassword.tsx view (330 lines) dedicated entirely to guiding the user through validating their setup token and defining their initial password securely.

2. Password Policy Enforcement UI

Commit Message: update on the password in setting and user management

Detailed Edits:

Changed: Synchronized the frontend UI with the backend's strict security policies. auth.validator.js, Settings.tsx, and UserManagement.tsx were updated to actively enforce and visually validate password complexity rules (12 characters, special characters, etc.) whenever an admin triggers a password reset.

3. IT Admin POV & Role Validation

Commit Messages: polished hr and super admin employee creation / Minor visual fix in IT admin pov in employee creation... (Merge PRs #187, #189)

Detailed Edits:

Changed: Heavily modified Directory.tsx (changing over 140 lines) to apply strict visibility constraints based on the logged-in user. For example, an IT Admin POV now sees a specific, truncated wizard when provisioning accounts compared to the full HR POV.

4. Hardcoded Field Constraints Removed

Commit Messages: Required date for archive / fix the hardcoded required field (Merge PRs #192, #193)

Detailed Edits:

Fixed: Stripped out rigid, hardcoded validation rules from Directory.tsx and EmployeeProfile.tsx (editing over 50 lines) that were blocking valid form submissions. A specific fix was added ensuring the "Date" field is strictly required before an employee record can be moved to the Archive.

5. Notification Cache & Department Rules

Commit Messages: notification hindi na need mag view kada switch ng tab / Fixed department creation requirement (Merge PRs #190, #191)

Detailed Edits:

Fixed (Frontend): Optimized the notification tray inside Header.tsx so it caches state, preventing the UI from aggressively polling or re-rendering every time the user clicks between tabs.

Fixed (Backend): Adjusted account.service.js and employeeidentity.js to enforce strict department validation checks during bulk Excel imports and manual user registrations.

[v1.6.0] - Role-Based Provisioning, Employee Tracking & Dashboard Upgrades

1. Role-Based Employee Creation

Commit Message: added role-based employee creation

Detailed Edits:

Changed (Backend): Expanded prisma/schema.prisma and capabilities.js to define specific roles for data ingestion.

Changed (Frontend): A massive overhaul of Directory.tsx and EmployeeProfile.tsx (over 500 lines modified). The UI now restricts standard HR accounts from provisioning certain high-level employee types (like Admins or Executives) unless they hold the specific granular capability to do so.

2. Live "Floating" Status Tracking

Commit Message: Updates for Floating and Live Update (Merge PR #184)

Detailed Edits:

Added (Backend): Created accessEvents.js to broadcast WebSockets payloads whenever an employee's status shifts.

Changed (Integration): Updated employee.controller.js and useRealtimeSubscription.ts so that when an employee is marked as "Floating" (unassigned to a campaign), their active status and access limitations update in real-time across all connected administrator dashboards without a refresh.

3. Dashboard Analytics Overhaul

Commit Message: Updates to dashboard and minor things (Merge PR #181)

Detailed Edits:

Changed: A sweeping UI update modifying over 1,100 lines across 41 files! The Dashboard.tsx, NewHiresModal.tsx, and EmployeeProfile.tsx were heavily refactored to support new analytics widgets.

Added: Formalized developer tracking by committing new changelog files to the repo (DateHired_Feature_Summary.md, DeviceAssets_Changes.md, CHANGES_SPECIAL_CHARS.md).

4. Hardened Employee ID Validation

Commit Message: validation of duplication in Employee Id

Detailed Edits:

Fixed: Adjusted employee.service.js to strictly query the Prisma database before saving. This prevents administrators from manually overriding the auto-generator with an Employee ID that is already assigned to a different user.

5. "Date Hired" Tracking & Table Naming Conventions

Commit Messages: Added Date hired in Step 3 and Step 4 / naming convention of the table (Merge PRs #182, #183)

Detailed Edits:

Added: Updated the "Add Employee" stepper wizard in Directory.tsx to require and process the "Date Hired" metric.

Fixed: Standardized the table headers and column naming conventions globally across Assets.tsx, Directory.tsx, Reports.tsx, and EmployeeImportReview.tsx.

[v1.5.0] - Email OTP, Password Complexity & Real-time Presence

1. Email OTP MFA Migration

Commit Messages: add OTP/MFA check md files / returned the otp for super admin (Merge PRs #174, #178)

Detailed Edits:

Changed (Backend): Pivoted the MFA architecture from TOTP (Authenticator apps) to Email-based One-Time Passwords (OTPs). Significantly refactored auth.service.js and built out a new email.service.js to dispatch verification codes via SMTP.

Added (Documentation): Created AUTH_DOCUMENTATION.md and MFA_SETUP.md to document the new dual-layered email authentication pipelines.

Fixed: Adjusted logic so that Super Admins cannot bypass the OTP requirement—they are strictly forced to verify via email upon every login.

2. Real-Time Presence (Online Status)

Commit Message: Implemented Real-time presence (Merge PR #179)

Detailed Edits:

Added (Backend): Created presence.js and upgraded socketServer.js to track active WebSocket connections. The backend now maintains a live memory registry of which users are currently online.

Added (Frontend): Developed the usePresence.ts hook and upgraded realtimeService.js to ping the backend and render active "green dot" online indicators for HR and IT admins globally.

3. Password Complexity Hardening

Commit Message: change password character to 12 from 8 (Merge PR #177)

Detailed Edits:

Changed: Strengthened the system's baseline security posture. Updated the regex in auth.validator.js (Backend) and the RegisterForm.tsx (Frontend) to force all new user passwords to a minimum length of 12 characters, rather than 8.

4. Rate Limiter Tolerance

Commit Messages: fix: increase global rate limit for office network / update: update the max of login limiter (Merge PRs #173, #176)

Detailed Edits:

Fixed: The Nginx IP-forwarding fix in v1.4.0 successfully identified the physical office network's static IP. However, because hundreds of employees share that same router IP, they were being blocked. This commit manually increased the global and login API rate limits inside app.js and auth.routes.js to tolerate the office's NAT traffic.

5. Docker Email Cleanup

Commit Message: removed mailpit from docker (Merge PR #175)

Detailed Edits:

Removed: Removed the mailpit (local email testing sandbox) container out of the

docker-compose.yml stack, streamlining the production deployment for actual SMTP providers.

[v1.4.0] - Avatar Uploads, Nginx Proxy & Security Hardening

1. Profile Avatar Uploads

Commit Message: Merge pull request #162

Detailed Edits:

Added (Backend): Implemented a new upload.js utility and updated employee.controller.js / employee.routes.js to securely process incoming binary image blobs.

Changed (Frontend): Heavily updated EmployeeProfile.tsx (over 50 lines added) to include an interactive UI allowing HR to upload, crop, and save profile pictures.

Added (Documentation): Added a dedicated AVATAR_FEATURE_DOCUMENTATION.md to guide developers on how the image handling pipelines work.

2. Nginx Reverse-Proxy & Rate Limiter Hardening

Commit Messages: feat: route api through frontend nginx / upgraded websocket and updated the rate limiter... (Merge PRs #164, #166)

Detailed Edits:

Added: Introduced frontend/nginx.conf to internally route API requests through a production Nginx server.

Fixed: Adjusted backend/src/app.js and the nginx.conf to ensure that client IP addresses are correctly forwarded through the "double reverse-proxy" setup. This was a critical fix because the backend Rate Limiter was previously blocking the internal Docker IP instead of malicious external actors.

3. Inactive Session Security (Auto-Logout)

Commit Message: Added 30min idle auto logout (Merge PR #165)

Detailed Edits:

Changed: Expanded AuthContext.tsx to actively monitor window focus and mouse interactions. If a user remains completely idle for 30 minutes, the system now automatically purges their session tokens and boots them back to the Login screen to prevent unauthorized access to unattended terminals.

4. Employee Status Filter Standardization

Commit Message: Change the filters in Profile account and Employee record to Floating and Separated (Merge PR #169)

Detailed Edits:

Added: Created the EMPLOYEE_STATUS_UPDATE_GUIDE.md to document the new nomenclature.

Changed: Modified employee.model.js, Directory.tsx, and EmployeeProfile.tsx to utilize standard "Floating" and "Separated" status filters instead of the legacy categories, updating both the database validation and the UI dropdowns simultaneously.

5. ESM & Vite Environment Patches

Commit Messages: fix ESM Import Crash / fix(vite): allow all hosts for dev server (Merge PRs #168, #170)

Detailed Edits:

Fixed (Backend): Resolved a critical crash in auth.service.js where an ESM import was failing inside a CommonJS execution context.

Fixed (Frontend): Adjusted vite.config.ts to allow all hosts, fixing a networking error where developers could not access the local dev server from secondary devices on the same LAN.

[v1.3.0] - Multi-Factor Authentication, Resizable Columns & Live Data Tweaks

1. Multi-Factor Authentication (MFA)

Commit Message: MFA implementation with remember this device

Detailed Edits:

Added (Backend): Expanded prisma/schema.prisma to support MFA secrets. Upgraded auth.service.js (adding over 110 lines) and auth.controller.js to implement Time-Based One-Time Passwords (TOTP) and "remember this device" session tokens.

Changed (Frontend): Modified Login.tsx to insert the secondary MFA verification step. Significantly expanded Settings.tsx (over 130 lines added) to allow users to toggle MFA on/off and scan setup QR codes.

2. Resizable Data Table Columns

Commit Message: slide in column feature (Merge PR #161)

Detailed Edits:

Added: Introduced a brand new src/components/ResizableHeader.tsx component to support draggable column widths. Added documentation for this via FEATURE_RESIZABLE_COLUMNS.md.

Changed: Refactored the core data tables inside Assets.tsx and Directory.tsx to utilize these resizable headers, drastically improving the ergonomics of viewing dense employee or asset data.

3. Login Validation UI Polish

Commit Messages: optimized login by highlighting the textbox red... / changed text color inside textbox (Merge PRs #156, #159)

Detailed Edits:

Fixed: Updated Login.tsx and authFields.tsx to actively highlight textboxes in red when the backend returns invalid credential errors, replacing the less noticeable text-only error prompts.

4. Dashboard Analytics Visuals

Commit Messages: Dashboard > HR > Analytics, centered text in pie... / adjustments in total personnel overview panel (Merge PRs #153, #158)

Detailed Edits:

Changed: Tweaked the SVGs and CSS in WorkArrangementModal.tsx and

TotalPersonnelModal.tsx to ensure labels remain perfectly centered and hover-states remain visible when Dark Mode is toggled on.

5. Live Data Polling Bugs

Commit Messages: live update of add employee on dashboard / remove the last update the live audit logs cause bug refresh every 5 seconds (Merge PRs #154, #157)

Detailed Edits:

Added: Wired the new Prisma realtime hooks into the Dashboard so it updates instantly when an employee is added.

Reverted: Attempted to add the same live hooks to AuditLogs.tsx and Header.tsx, but quickly reverted the code (removing ~40 lines) because it caused an infinite render loop, refreshing the page every 5 seconds.

[v1.2.0] - Payload Optimization, Role Parsing & UX Polish

1. Large Payload Optimization (Data Ingestion)

Commit Message: fix: increase json payload limit to support large excel imports (Merge PR #145)

Detailed Edits:

Fixed: Adjusted backend/src/app.js and error.middleware.js to massively increase the Express server's JSON body-parser limit. Previously, the backend was rejecting or crashing when HR attempted to import large, organization-wide Excel sheets due to default payload size restrictions.

2. User Role Parsing Fixes

Commit Message: Fix the User role permission bug (Merge PR #149)

Detailed Edits:

Fixed (Backend): Corrected userProfile.model.js, role.service.js, and the publicUser.js utility (adding over 70 lines) to ensure that a user's highly granular RBAC capabilities correctly mapped to their public session tokens.

Fixed (Frontend): Resolved a caching bug in UserManagement.tsx (Commit 40dc5b2) forcing the component to actively refetch the active roles whenever an administrator switches configuration tabs.

3. Employee Record Data Formatting

Commit Messages: Fix: employee.model.js data format / fix: allow suffix field in employee security whitelist (Merge PRs #142, #144)

Detailed Edits:

Fixed: Updated employeeSecurity.js to whitelist the "Suffix" field (e.g., Jr., Sr.), preventing the backend from stripping it out during data saves.

Changed: Refactored the data-casting rules inside employee.model.js to fix formatting anomalies caused by the transition to Prisma.

4. Dashboard Simplification

Commit Message: cards from dashboard is removed (Merge PR #146)

Detailed Edits:

Removed: Stripped out several overly complex modals (AssignedAssetsModal,

NewHiresModal, TotalPersonnelModal) and heavily simplified the root Dashboard.tsx view to improve load times and visual clarity.

5. Global Cursors & Hover States (UX Polish)

Commit Messages: cursor on settings tab / settings hover 3 buttons / Cursors default in login... (Merge PRs #147, #148, #150)

Detailed Edits:

Changed: Applied sweeping CSS tweaks across Header.tsx, Sidebar.tsx, Directory.tsx, Login.tsx, and Settings.tsx to standardize mouse cursor states (pointer vs default) and hover animations on interactive elements.

[v1.1.0] - Prisma ORM Migration & Documentation Polish

1. The Prisma ORM Migration (Local-Based System)

Commit Message: overhauled the system architecture to local based system (Merge PR #136)

Detailed Edits:

Removed (Architecture): Stripped the direct supabase.js integration from the backend and removed the supabase-js dependencies from the frontend.

Added (Architecture): Introduced the Prisma ORM. Added prisma.config.ts and formally defined the database schema in backend/prisma/schema.prisma (over 140 lines).

Changed (Backend): A massive architectural refactor (editing over 1,200 lines). Every single backend model file (account.model.js, employee.model.js, auditLog.model.js, etc.) and the auth.service.js were rewritten to query the database locally using Prisma instead of relying on Supabase's proprietary client SDKs.

Changed (CI/CD): Updated package.json scripts to automatically run npx prisma generate whenever the Node server spins up.

2. Prisma Crash & Null Constraint Fixes

Commit Messages: fix: resolve employee import crash caused by Prisma schema mismatch and null constraints / fix: resolve Prisma null constraint crashes... (Merge PR #140)

Detailed Edits:

Fixed: Resolved critical data ingestion crashes that appeared after the Prisma migration.

Modified schema.prisma, employee.model.js, account.model.js, and userProfile.model.js to correctly handle missing or null data fields during bulk Excel imports without throwing fatal ORM constraint errors.

3. Vercel & Render Configurations

Commit Message: setup vercel & render (Merge PR #135)

Detailed Edits:

Changed: Adjusted backend/src/config/env.js to properly map environment variables so the backend can be smoothly deployed to Render, while the frontend targets Vercel.

4. Official Setup & Deployment Documentation

Commit Messages: added a setup.md file / [Added DEPLOYMENT.md and WORKFLOW.md] (Merge PRs #137, #140)

Detailed Edits:

Added: Extracted heavy setup instructions out of the root README.md and formally documented them in a dedicated 130-line SETUP.md file.

Added: Introduced DEPLOYMENT.md (120 lines) and WORKFLOW.md (58 lines) to establish strict guidelines for developers contributing to the new Prisma-based monorepo.

5. UI Animations & IT Assets Tweaks

Commit Messages: UserManagement sub categ transition / [Assets.tsx overhaul] (Merge PRs #133, #139)

Detailed Edits:

Changed (Frontend): Refactored Assets.tsx (modifying nearly 700 lines) to fix rendering issues and pagination layouts.

Changed (Frontend): Added smooth sub-category transition animations to UserManagement.tsx when switching between user configuration tabs.

[v1.0.0] - Monorepo Restructure, Realtime Data & Dockerization

1. The Great Monorepo Migration (Major Architecture Shift)

Commit Messages: [Massive structural merge] (Commit affecting 169 files)

Detailed Edits:

Changed: The entire repository was restructured from the ground up to support a production-grade monorepo format. The legacy server/ root directory was entirely migrated into a new backend/ workspace.

Changed: The legacy src/ React directory was migrated into a new frontend/src/ workspace, cleanly decoupling the two environments.

Removed: Cleaned up the root directory by deleting over 15 deprecated temporary scripts, scratch pads, and seed generators (e.g., generate_seed.js, sql_to_excel.js, update_dashboard.js).

2. Realtime Subscriptions & Polling

Commit Message: added polling + fix some bugs (Merge PR #130)

Detailed Edits:

Added (Backend): Introduced realtime_setup.sql and realtime_rls_bypass.sql to configure Supabase's real-time publication channels on the Postgres database.

Added (Frontend): Created useRealtimeSubscription.ts and configured lib/supabase.ts to actively listen for database mutations.

Changed: Wired these new realtime hooks directly into Directory.tsx, UserManagement.tsx, AuditLogs.tsx, and EmployeeProfile.tsx (modifying over 400 lines) so that the UI now updates instantly for all connected clients when an employee record or user account is changed, without requiring a page refresh.

3. Production Dockerization

Commit Message: fixed docker

Detailed Edits:

Fixed: Adjusted the backend/Dockerfile and frontend/Dockerfile build steps, and overhauled the root docker-compose.yml to ensure both services spin up correctly and communicate across the correct internal Docker networks for production deployment.

4. Official Documentation & Specifications

Commit Message: changed program desc files (Merge PR #131)

Detailed Edits:

Changed: Heavily updated the main README.md (over 100 lines edited) to document the new monorepo architecture and Docker startup commands.

Added: Locked in the official security_spec.md and metadata.json files, formally documenting the RBAC capabilities and network architecture for the v1.0.0 release.

[v0.14] - The Notifications Engine, Inactive Reminders & Duplicate Cautions

1. The Global Notifications Engine

Commit Messages: added notif to employee creation / notification always enabled for superadmin... (Merge PRs #120, #124)

Detailed Edits:

Added (Backend): Built a persistent notifications system from scratch (adding notifications_setup.sql, notification.controller.js, notification.model.js, and notification.service.js).

Added (Integration): Wired this engine into employee.service.js so the system automatically broadcasts an alert to HR and Admins whenever a new employee profile is created.

Changed (Frontend): Heavily updated Header.tsx (over 100 lines) to include a persistent notification tray, complete with timestamps (createdAt labels) and a "Clear all Notifications" action.

2. Smart Duplicate Cautions (Data Ingestion)

Commit Message: duplicate name caution warning (Merge PR #122)

Detailed Edits:

Added (Backend): Upgraded employeeImport.service.js (modifying over 110 lines) to perform fuzzy-matching during bulk Excel imports.

Added (Frontend): EmployeeImportReview.tsx was updated to visually flag incoming rows with a "Caution: Duplicate Name" warning if the system detects an active employee with the exact same name, preventing accidental overwrites or twin records.

3. Inactive Employee Reminders

Commit Message: inactive reminder (Merge PR #123)

Detailed Edits:

Added (Frontend): Created a new src/features/employees/InactiveEmployeesButton.tsx component and injected it into the Directory.tsx toolbar.

Changed (Backend): Updated the employee.model.js and employee.service.js to actively query and flag employee accounts that have been dormant or inactive for a prolonged period, pushing these reminders to the new frontend component.

4. RBAC & Security Cleanup

Commit Messages: notification permission added / remove sites permission-redundant
Detailed Edits:

Fixed: Adjusted role.service.js and capabilities.js to ensure that Super Admins bypass notification permission checks (they always receive critical alerts).

Removed: Stripped out redundant permission checks from site.routes.js and permissions.ts that were causing conflicts with the new granular Role-Based Access Control system.

5. Import Department Mapping Fixes

Commit Message: import department fix (Merge PR #119)

Detailed Edits:

Fixed: Resolved a critical bug in EmployeeImportReview.tsx (modifying over 300 lines) and employeeImport.service.js where imported employees were being assigned to the wrong internal departments due to a mapping array offset.

[v0.13] - Import Deduplication, Asset Formatting & RBAC Hardening

1. Hardening RBAC Permissions

Commit Message: fixed all the not working account permissions (Merge PR #117)

Detailed Edits:

Fixed (Backend): Tightened the middleware constraints across nearly every endpoint (account, device, employee, import, site routes). Previously, some routes were bypassing the granular capability checks implemented in v0.11.

Changed (Frontend): Overhauled AuthContext.tsx (modifying 55 lines) to securely propagate the active user's permissions globally. Dashboard.tsx, Reports.tsx, and EmployeeProfile.tsx were updated to rigorously check these contexts before rendering sensitive data blocks.

2. The Import Deduplication Engine

Commit Message: remove fixed import staging from table if imported, fix duplicates feature added... (Merge PR #115)

Detailed Edits:

Added (Backend): Upgraded employeeImport.service.js to automatically scan incoming bulk uploads for duplicate records against the live database.

Fixed (Frontend): The ImportIssuesButton.tsx and EmployeeImportReview.tsx were updated to correctly calculate pending counts (ignoring duplicates) and automatically clear staged records from the UI once they are successfully committed.

3. IT Assets & Audit Log UI Refinements

Commit Messages: columns on IT assets now show all 6... / font bug in audit logs / removed checkbox on IT assets... (Merge PRs #109, #110, #111, #112, #113)

Detailed Edits:

Changed: Stripped out the column selector in Assets.tsx, forcing all 6 primary hardware columns to display by default.

Changed: Temporarily removed, and then re-added, the visibility checkboxes for IT

Assets inside the User Management and Employee Record views based on rapid iteration testing.

Fixed: Corrected a font rendering bug in AuditLogs.tsx that caused text to clip on smaller screens.

4. REMOTE ID Formatting & Defaults

Commit Message: fixed rustdesk id format and account permission default (Merge PR #116)

Detailed Edits:

Fixed: Updated user.service.js and Assets.tsx to correctly format and render the REMOTE ID strings, while applying safe fallbacks for default account permissions during new user creation.

5. Role Dropdown & Global Formatting

Commit Messages: fixed role dropdown in user management / [Global formatting commit]

Detailed Edits:

Fixed: Updated UserManagement.tsx and the package-lock.json dependencies to resolve a z-index bug where the role selection dropdown was hiding behind table rows.
Changed: A massive global auto-format (likely triggered by Prettier) swept through 19 files, standardizing spacing and CSS structures across the entire frontend application.

[v0.12] - Record Mutability, Asset Formatting & Security Polishing

1. Auto-Generated Data Overrides (Mutability)

Commit Messages: auto generated information can be modified now / allow editing account classification (Merge PR #102)

Detailed Edits:

Changed (Backend): Refactored employee.service.js, account.service.js, and employeeSecurity.js to allow admins to safely override the previously strict auto-generated Employee IDs and LMS Accounts.

Changed (Frontend): Updated Directory.tsx and EmployeeProfile.tsx (over 400 lines added) to unlock these fields in the UI. Also added functionality in Departments.tsx allowing HR to mutate/change an employee's account classification without having to delete and recreate the account from scratch.

2. Report Download Security Guard

Commit Message: disabled report download without permission (Merge PR #99)

Detailed Edits:

Fixed: Adjusted Reports.tsx to actively evaluate the logged-in user's granular RBAC permissions. Users without the explicit can_export_reports capability now have the download button entirely disabled and secured.

3. IT Assets Table Formatting

Commit Messages: fixed table view on IT assets / fixed format of it assets fields (Merge PRs #100, #103)

Detailed Edits:

Changed (Frontend): Restructured the data table inside Assets.tsx (modifying over 250

lines) to improve visibility and pagination.

Changed (Backend): Stripped out unused fields from `device.model.js` and `device.validator.js` to tighten the data payload and prevent UI rendering mismatches.

4. Visibility & UX Enhancements

Commit Messages: unsigned texts are now red for visibility... (Merge PR #107)

Detailed Edits:

Added: Updated `EmployeeProfile.tsx` to flag "Unassigned" fields in red text.

Changed: Expanded the "Incomplete Data" visual indicator to actively scan the employee's security/compliance records as well, warning HR if an employee is missing critical security clearance data.

5. UI Filters & Identity Formatting Fixes

Commit Messages: fixed error on user management tab when clicking the filters / fixed employee name format (Merge PRs #105, #106)

Detailed Edits:

Fixed: Resolved a frontend crash in `UserManagement.tsx` that occurred when administrators rapidly clicked through the user filters.

Fixed: Adjusted the regex string handling in `server/src/utils/employeeIdentity.js` to fix lingering whitespace bugs when formatting complex compound employee names.

[v0.11] - Roles & Permissions Overhaul, Registration Refactoring

1. The Granular Roles & Permissions Engine (RBAC)

Commit Message: role overhaul (Merge PR #90)

Detailed Edits:

Added (Backend): Built a massive security upgrade (adding over 500 lines across `capabilities.js`, `role.controller.js`, `role.model.js`, `role.service.js`, and `employeeSecurity.js`). This replaced the basic "admin/viewer" toggle with a highly granular capability checklist (e.g., "can_export_reports", "can_delete_users").

Added (Frontend): Created `RolesPanel.tsx`, `CapabilityChecklist.tsx`, and `permissions.ts` to allow Super Admins to create custom security roles and dynamically assign these granular permissions.

Changed: Injected permission middleware into almost every backend route (`account.routes.js`, `employee.routes.js`, `auditLog.routes.js`, etc.) to enforce these new rules at the API level.

2. Registration Flow Component Extraction

Commit Messages: extracted register component (Merge PR #89)

Detailed Edits:

Changed: The `Login.tsx` file had become too massive, so over 900 lines of code were stripped out of it.

Added: Extracted the registration logic into newly modularized `RegisterForm.tsx` and `authFields.tsx` components, making the codebase much cleaner and easier to maintain.

Removed: Deleted deprecated `systemAlert` controllers and routes that were no longer needed.

3. Archive & Audit Formatting Fixes
Commit Messages: archive bug / fixed format on audit log when deleting (Merge PRs #96, #97)
Detailed Edits:
Fixed (Archive): Resolved bugs in employee.model.js and Reports.tsx (modifying over 140 lines) where archiving an employee was causing data inconsistencies in the generated reports.
Fixed (Audits): Corrected a formatting bug in AuditLogs.tsx so that when a user is hard-deleted, the audit log accurately formats the JSON snapshot of the deleted record instead of throwing an error.
4. Role Permission UI Patches
Commit Messages: role permissions fixes (Merge PR #97)
Detailed Edits:
Fixed: Adjusted Header.tsx, Directory.tsx, EmployeeProfile.tsx, and Reports.tsx to properly hide or disable specific UI buttons (like Export or Delete) if the newly implemented Role Engine determines the active user lacks those specific capabilities.
5. Name Parsing Identity Fix
Commit Message: second name going into middle name bug
Detailed Edits:
Fixed: Corrected a regex parsing issue in server/src/utils/employeeIdentity.js where employees with two first names (e.g., "Mary Jane") were having their second first name accidentally parsed as their middle name during LMS account generation.

[v0.10] - IT Assets Filters, Accessibility & Auto ID Generation

1. Global Font Size Adjuster (Accessibility)
Commit Message: dark mode enhancement and font size adjuster (Merge PR #81)
Detailed Edits:
Added: Created a new global src/contexts/TextSizeContext.tsx to manage system-wide font scaling.
Changed: Expanded Settings.tsx (adding 70 lines) to include visual controls for users to increase or decrease text sizes globally.
Changed: Updated index.css and index.html to inject these dynamic font variables across the entire application alongside Dark Mode improvements.
2. Auto-Generate Employee IDs
Commit Message: auto generate employee ID (Merge PR #85)
Detailed Edits:
Added: Created utility scripts in the project root (generate_seed.js and sql_to_excel.js) to assist developers in batch-generating mock identities.
Changed: Upgraded Directory.tsx (adding 65 lines) to include functionality that automatically predicts and generates the next sequential Employee ID during the manual "Add Employee" workflow.

3. IT Assets Engine Enhancements
Commit Messages: made another column in it assets, add a global edit button... / working it assets filter (Merge PRs #80, #84)
Detailed Edits:
Added (Backend): Expanded the device.model.js to track new metrics.
Changed (Frontend): Heavily refactored Assets.tsx (over 230 lines added) to introduce a global edit mode for asset rows and a functional status filter, allowing IT to easily query for specific hardware states.
4. Massive Codebase Cleanups & UI Fixes
Commit Messages: enhanced ui + fixed some bugs / cleaned the codebase (Merge PRs #82, #83)
Detailed Edits:
Changed: A monumental cleanup phase that modified over 3,000 lines of code across Assets.tsx, Departments.tsx, Directory.tsx, and EmployeeProfile.tsx. This squashed lingering layout bugs from the Dark Mode rollout.
Removed: Stripped out dead code, unused imports, and redundant logging statements across 9 different frontend components to lighten the bundle size.
5. Notification & Theme Polishing
Commit Messages: fixed notification button and bug / updated dark mode buttons in Reports and IT Assets page
Detailed Edits:
Fixed: Resolved an interaction bug in Header.tsx where the notification tray button would stall.
Changed: Updated index.css to standardize the appearance of action buttons within the Reports and Assets pages when Dark Mode is active.

[v0.9] - Dark Mode, Accessibility & Auth Modals

1. System-Wide Dark Mode
Commit Messages: dark mode patch (Merge PR #73)
Detailed Edits:
Added: Created a new global src/contexts/ThemeContext.tsx to actively manage and persist the user's visual theme preference (Light/Dark).
Changed: Injected over 200 lines of CSS variables into src/index.css to define the exact Dark Mode color palettes.
Changed: Refactored almost every major page and component (Header.tsx, Sidebar.tsx, Dashboard.tsx, Directory.tsx, Login.tsx) to dynamically react to the active theme context and prevent visual bleeding when toggling modes.
2. Input Validation & Accessibility
Commit Messages: only accept numeric input in phone number / improved employee record ui and disabled numeric inputs in names (Merge PR #75)
Detailed Edits:

Fixed: Added strict input masks to Directory.tsx and EmployeeProfile.tsx ensuring that phone number fields strictly accept numbers, and name fields actively reject numeric inputs. This prevents human-error typos during data entry.

Changed: Massively overhauled EmployeeProfile.tsx (editing over 1,300 lines) to improve the ergonomics and accessibility of the data entry forms.

3. Login Auth Modals & User Management Security

Commit Messages: enhanced ui and added login auth modals (Merge PR #74)

Detailed Edits:

Added: Introduced secure authentication modals within UserManagement.tsx (which saw a massive 1,000-line expansion) requiring administrators to re-verify their credentials before performing destructive or highly sensitive actions.

Changed: Refined the routing rules inside AuthContext.tsx and PageLayout.tsx to handle these intermediate modal states gracefully without breaking the single-page application (SPA) flow.

4. Employee Identity Engine Enhancements

Commit Messages: Merge branch 'main' into railey / fixed employee records + debug (Merge PR #76)

Detailed Edits:

Changed: Updated the backend server/src/utils/employeeidentity.js algorithm (modifying around 60 lines) to handle complex edge cases when generating LMS account names and ID sequences for dynamically imported users.

Fixed: Adjusted the Directory.tsx rendering logic (modifying 190 lines) to properly display these newly formatted identities and squashed rendering bugs associated with the data grid.

[v0.8] - UI Animations, Password Policies & The Undo Feature

1. The Audit "Undo" Engine

Commit Message: undo on audits

Detailed Edits:

Added (Backend): Expanded auditLog.controller.js and auditLog.model.js (adding over 60 lines) to support a rollback/undo mechanism.

Changed (Frontend): Heavily modified AuditLogs.tsx and EmployeeProfile.tsx (adding over 200 lines combined) to allow HR/IT administrators to literally "undo" a previously audited change directly from the UI, restoring the previous record state.

2. Password Policies

Commit Message: added password requirements in settings (Merge PR #63)

Detailed Edits:

Added: Injected over 100 lines into Settings.tsx to enforce strict visual password requirements (e.g., minimum length, uppercase, special characters) when administrators or users are configuring system accounts.

3. Global Pagination Component

Commit Message: page number (Merge PR #65)

Detailed Edits:

Added: Created a new, centralized src/components/Pagination.tsx component.

Changed: Stripped out over 130 lines of redundant, hardcoded pagination logic across Assets.tsx, AuditLogs.tsx, and Directory.tsx, forcing them all to route through the single unified Pagination.tsx component instead.

4. UI Animations & Polishing

Commit Messages: enhanced employee profile ui and added animations / enhanced user management + some animations (Merge PRs #61, #64)

Detailed Edits:

Changed: EmployeeProfile.tsx received a massive 700-line update to introduce smooth micro-animations during state changes and tab switches.

Changed: UserManagement.tsx received a 300-line update to refine the layout and add similar layout transition animations.

Changed: Minor padding and layout adjustments applied to Directory.tsx button spacing.

5. Dynamic Charts & Reporting Expansion

Commit Messages: dynamic chart / updated reports page (Merge PRs #66, #67)

Detailed Edits:

Changed: Refactored the charts in Dashboard.tsx to handle dynamic window resizing and data streaming more fluidly.

Added: Massively expanded Reports.tsx (adding nearly 700 lines of code) to support more complex query structures and better visual formatting when generating system reports.

6. Minor Audit Logic Fixes

Commit Message: removed import issues button animation and disabled end dates before start date in audit logs

Detailed Edits:

Fixed: Prevented a logic error in AuditLogs.tsx where users could accidentally filter queries with an end date occurring before a start date.

[v0.7] - Inline Editing, Reports & Massive UI/UX Overhauls

1. Downloadable Reporting Engine

Commit Message: reports downloadable (Merge PR #52)

Detailed Edits:

Added: Built out the src/pages/Reports.tsx component (adding nearly 400 lines of code) to allow HR and IT administrators to generate and download comprehensive audit and employee activity reports directly from the interface.

2. Inline Editable Rows (User Management)

Commit Message: editable rows of users (Merge PR #53)

Detailed Edits:

Added (Backend): Expanded user.controller.js and user.service.js to handle targeted row-level updates.

Changed (Frontend): Massively refactored UserManagement.tsx (over 400 lines edited)

to introduce inline editing. Administrators can now edit user account details directly inside the table rows for much faster administration, eliminating the need to open separate edit modals.

3. Import Review Quality of Life (QoL)

Commit Message: import review update qol (Merge PR #58)

Detailed Edits:

Changed: Refined the logic in `employeeImport.service.js` and `EmployeeImportReview.tsx` to handle data mapping conflicts more gracefully.

Added: Improved the `ImportIssuesButton.tsx` and linked import status notifications into the `Reports.tsx` module to give users better feedback during massive data ingestions.

4. Notification UI Fixes

Commit Message: notification fixed / notif backdrop close

Detailed Edits:

Fixed: Adjusted `Header.tsx` to properly handle backdrop clicks (clicking outside the notification panel to close it) and fixed notification bubbling issues within the `UserManagement` views.

5. Massive UI/UX Overhauls (The "Enhanced" Commits)

Commit Message: enhanced directory and departments ui / enhanced the overall ui / improved overall ux/ui (Merge PRs #51, #55, #57, #59)

Detailed Edits: (These were monolithic commits modifying over 5,000 lines of code across the frontend)

Changed (Layouts): Completely overhauled the visual hierarchy, padding, and responsiveness of the `Sidebar.tsx`, `Header.tsx`, and `PageLayout.tsx`.

Changed (Pages): Applied significant visual facelifts to almost every single major view: `Dashboard.tsx`, `Directory.tsx`, `Departments.tsx`, `AuditLogs.tsx`, `Login.tsx`, and `Assets.tsx`.

Added (UX): Created a new `SkeletonLoadingMessage.tsx` component to provide smooth, modern skeleton loading states while the frontend waits for the backend API to return data, significantly reducing UI layout shift.

Changed (Backend): Refined `account.service.js` and `employeeIdentity.js` to ensure the new UI components received data in the highly specific formats required by the new layouts.

[v0.6] - Department Settings, Secure Deletions & Notifications (2026-06-02)

1. The Departments Management Engine

Timestamp & Hash: 2026-06-02 (75efe92, 1d05a4e & Merges 8a12c77, 127b247)

Commit Message: added department settings... / added rename department code and added a secure confirmation step

Detailed Edits:

Added (Backend): Built out the `account.controller.js` and `account.service.js` to allow renaming and deleting internal department branches from the database. Added

validators to ensure correct department string schemas.

Added (Frontend): Massively expanded src/pages/Departments.tsx (adding over 400 lines of code) to introduce a dedicated settings panel for each department.

Added (Security): Implemented a mandatory "type the department name to confirm" secure deletion step to prevent HR or Super Admins from accidentally wiping out an entire department.

(Note: An earlier attempt at this feature was merged in 0b9ed9c but was quickly reverted in 7fb03ae due to bugs, before being correctly re-implemented in the commits above).

2. Employee Identity & Account Auto-Generation

Timestamp & Hash: 2026-06-02 (58b3801 & Merge 853317b)

Commit Message: Merge branch 'main' into stephen

Detailed Edits:

Added: Introduced server/src/utills/employeeidentity.js and sql/department_codes_setup.sql. This system acts as a central identity provider that automatically maps generated ID numbers, LMS accounts, and department codes whenever an employee is imported or registered.

Changed: Refactored employee.service.js and employeeImport.service.js (over 180 lines combined) to pipe all new employees through this new Identity module before saving them to the database.

3. Directory Sorting & Layout Swaps

Timestamp & Hash: 2026-06-02 (67ac442 & Merge f428c12)

Commit Message: added employee record sort, updated dropdown...

Detailed Edits:

Added: Implemented column sorting logic in Directory.tsx allowing users to click table headers to sort records alphabetically.

Changed: Swapped the visual positioning of the LAST NAME and ID fields within the "Add Record" UI for better data-entry ergonomics.

Changed: Updated the update-record dropdowns in EmployeeProfile.tsx to align with the new department schemas.

4. Registration Dropdown Fixes

Timestamp & Hash: 2026-06-02 (de8c312 & Merge 8b98d29)

Commit Message: added department dropdown in registration

Detailed Edits:

Fixed: Adjusted the backend employeeImport.service.js and frontend Login.tsx to resolve data mismatch bugs when rendering and selecting the dynamic department dropdown during the new user registration flow.

5. Notification & Toaster Migration

Timestamp & Hash: 2026-06-02 (f6e419d, 9e55cb9, 574fa27 & Merges)

Commit Message: fixed toaster / notification to 10s

Detailed Edits:

Changed: Stripped over 100 lines of notification and toaster logic out of the root App.tsx component.

Added: Migrated the notification system into src/components/layout/Header.tsx, creating a cleaner localized state, and hardcoded the notification display duration to 10 seconds.

[v0.5] - Data Import Finalization, Routing & Registration Polish (2026-06-01 to 2026-06-02)

1. Registration Flow & Logout Modal

Timestamp & Hash: 2026-06-01 to 2026-06-02 (6238907, 9ea7a5c & Merges dab7581, 495709f)

Commit Message: fixed registration form and added logout modal / added department dropdown in register section

Detailed Edits:

Changed: Massively refactored the Login.tsx component (over 600 lines edited) to fix validation bugs during new user registration.

Added: Introduced dynamic department dropdowns during the registration flow, pulling active departments from the backend (auth.controller.js and auth.validator.js updated to enforce this).

Added: Implemented a secure logout confirmation modal inside Sidebar.tsx to prevent accidental logouts.

2. SPA Routing Configuration

Timestamp & Hash: 2026-06-02 (c263bcb & Merge 3d7410c)

Commit Message: fix SPA routing

Detailed Edits:

Added: Created a vercel.json file at the project root to properly configure routing fallbacks, ensuring that direct URL navigations (like /dashboard or /directory) correctly route to index.html instead of throwing 404 errors.

3. Directory Search & Table Formatting

Timestamp & Hash: 2026-06-02 (864a2a5 & Merge 43d7349)

Commit Message: fixed table format (page and buttons) and search bar

Detailed Edits:

Changed: Refactored Directory.tsx (modifying nearly 190 lines) to fix UI layout issues with the table pagination and action buttons.

Added: Wired up the global Search Bar to actively filter the directory data.

4. Dashboard Distribution Visuals

Timestamp & Hash: 2026-06-02 (4c32aa1 & Merge 6e94c94)

Commit Message: staff status distribution now working

Detailed Edits:

Fixed: Corrected the data mapping in Dashboard.tsx so the Staff Status distribution charts accurately display real-time backend data.

5. Finalizing the Data Import Engine & Secure Deletions

Timestamp & Hash: 2026-06-02 (6861316, 490bd6a, 6583956 & Merges)

Commit Message: data import complete / import delete will also delete from database, 10s deletion to type to confirm

Detailed Edits:

Added (Safety Checks): Heavily updated EmployeeImportReview.tsx (over 500 lines modified) to implement a strict "type to confirm" deletion modal with a 10-second safety delay before HR can delete staged records.

Changed (Backend Sync): Updated employeeImport.controller.js and its respective services so that deleting a row in the UI also securely wipes the staged record from the Postgres database.

Added (Automations): Added new utility files (lmsAccount.js & lmsAccount.ts) to automatically generate standardized LMS account names for newly imported users.

Fixed: Resolved several severe frontend React rendering crashes in the Import Review component caused by state mismatches during massive data loads (6583956).

6. UI Polish

Timestamp & Hash: 2026-06-02 (51f359a & Merge 9e946bb)

Commit Message: cursor and icon

Detailed Edits:

Changed: Updated index.html and src/index.css to implement a custom global mouse cursor and assign the official app icon.

[v0.4] - Data Imports, Departments & Audit Traceability (2026-05-28 to 2026-06-01)

1. The Bulk Data Import Engine

Timestamp & Hash: 2026-05-29 to 2026-05-31 (095eb67 & Merge a1523ca)

Commit Message: employee record import and resolve

Detailed Edits:

Added (Backend): Built a massive data ingestion engine (adding over 500 lines of code across `employeeImport.controller.js`, `employeeImport.service.js`, and `employeeImport.model.js`) to parse, stage, and insert bulk Excel/CSV records.

Added (Backend): Created a new SQL staging table `sql/employee_import_staging.sql` to hold imported records for review before committing them to the primary employee table.

Added (Frontend): Created a dedicated 575-line interface (`src/pages/EmployeeImportReview.tsx`) allowing HR to review imported records, highlight errors, and resolve data conflicts before finalizing the import. Added the `ImportIssuesButton.tsx` component.

2. Audit Traceability & Readability Improvements

Timestamp & Hash: 2026-05-29 to 2026-05-31 (4408e31, f07bdb1, 3b47985, fa11d3a, 81bd549 & Merges 97a9ed3, 473b768, ceef322)

Commit Message: connected audit logs to database / added traceability by tracking audit by username / full name

Detailed Edits:

Added: Introduced `server/src/utils/auditActor.js` and modified the `auth.middleware.js` to automatically extract the active user's identity during any API request.

Changed (Backend): Refactored all data services (`employee`, `site`, `device`, `account`) to inject this `auditActor`. The database now correctly tracks who made a change (by full name and username) instead of just storing an anonymous UUID.

Changed (Frontend): Completely overhauled the `AuditLogs.tsx` page layout and logic (modifying over 250 lines) to improve the human readability of these tracked changes.

3. Dynamic Departments Page

Timestamp & Hash: 2026-06-01 (e4eadac)

Commit Message: made department page dynamic and connected the account section in employee records

Detailed Edits:

Changed: Stripped out nearly 300 lines of hardcoded placeholder logic from `Directory.tsx`.

Added: Heavily modified `src/pages/Departments.tsx` (nearly 300 lines added) to fetch, render, and manage actual dynamic department data straight from the backend database.

4. Viewer Permissions & Role Guards

Timestamp & Hash: 2026-06-01 (a1165c2)

Commit Message: removed add and edit buttons in viewer accounts

Detailed Edits:

Changed: Injected permission guards across `account.routes.js` and multiple frontend files (`Directory.tsx`, `Departments.tsx`, `EmployeeProfile.tsx`, `App.tsx`) to physically hide or disable "Add", "Edit", and "Import" buttons if the logged-in user only holds a 'Viewer' account type.

5. Profile & Archive UI Patches

Timestamp & Hash: 2026-05-28 to 2026-05-29 (e3aa783, 1dfba3c, 6414ac1 & Merges)

Commit Message: mis click / table view name uncheckable...

Detailed Edits:

Fixed: Added 100+ lines of fallback logic to `EmployeeProfile.tsx` to handle edge cases when rendering archived users.

Fixed: Resolved a bug in `Directory.tsx` where certain table rows and checkboxes were unclickable upon initial page load.

[v0.3] - Layout Refinements, Bug Fixes & Local Environments (2026-05-26 to 2026-05-28)

1. Employee Profile Enhancements

Timestamp & Hash: 2026-05-26 (261ce48)

Commit Message: Merge pull request #11 from tomatofrog1/railey

Detailed Edits:

Changed: Heavily modified `EmployeeProfile.tsx` (adding over 160 lines of code) to significantly improve the visual layout and data presentation of individual employee records.

Changed: Minor layout adjustments to `Directory.tsx` to align with the new profile design.

2. Backend Render & Dependency Fixes

Timestamp & Hash: 2026-05-26 (689ed0c & Merge f90b990)

Commit Message: fixed backend render error

Detailed Edits:

Fixed: Resolved a backend rendering and deployment crash by forcing strict

dependency resolutions and updating both the frontend and backend package-lock.json files.

3. Authentication Loop Fix

Timestamp & Hash: 2026-05-26 (a057e16 & Merge 9e9c2fc)

Commit Message: fixed authentication required even tho user is logged in

Detailed Edits:

Fixed: Removed a faulty middleware block in server/src/app.js that was incorrectly forcing authenticated users back to the login screen despite holding a valid JWT session.

4. Local Development Seeding

Timestamp & Hash: 2026-05-26 (40467e4 & Merges 76dc1fa, 0e07994)

Commit Message: add seed account for local

Detailed Edits:

Added: Updated server/src/services/auth.service.js and server/src/server.js to automatically inject a master seed account into the local database upon startup to streamline testing for developers.

Added: Updated .env.example and README.md files across the repo to document how to use the new local seed accounts.

5. Table Layouts & Department Filtering

Timestamp & Hash: 2026-05-26 to 2026-05-27 (df6fa8d, 039597b & Merges 16a86aa, 7860d9a)

Commit Message: table view positioning / table layout size and internal department filter

Detailed Edits:

Changed: Adjusted global container paddings inside src/components/layout/PageLayout.tsx.

Changed: Refactored the data tables in Directory.tsx (over 100 lines modified) to fix column sizing and introduced a new functional dropdown filter specifically for filtering personnel by Internal Departments.

6. Archive Feature Polish

Timestamp & Hash: 2026-05-28 (241d665, 8ee77a1, 59f5ea5 & Merge cdb7cf9)

Commit Message: fixed archive status, button, and modal / added archive filter

Detailed Edits:

Fixed: Resolved UI logic bugs in EmployeeProfile.tsx where the "Archive" button state and confirmation modal were not correctly reading the employee's active/archived status from the database.

Added: Added a global toggle filter to Directory.tsx allowing HR to easily switch the table view to only show "Archived" (soft-deleted) employees.

7. Core Feature Consolidation (Main Merge)

Timestamp & Hash: 2026-05-28 (da40d65)

Commit Message: merge main into main

Detailed Edits:

Changed: A massive integration commit (modifying 39 files with 1,875 insertions). This safely integrated the disparate feature branches (Dashboard pie charts, Dynamic Settings engine, and the polished Archive feature) into the single unified main branch, ensuring all features coexisted without conflicts.

[v0.2] - Authentication, Data Models & Dashboard Features (2026-05-22 to 2026-05-26)

1. Database Seeding & ORM Dependencies

Timestamp & Hash: 2026-05-22 (d01c56b & 203251a)

Commit Message: (Dependencies & Seed data commits)

Detailed Edits:

Added: Installed essential backend dependencies like pg (Postgres) and prisma into server/package.json.

Added: Created server/prisma/seed.js to automatically populate the database with initial testing data (dummy Employees and UserProfiles).

Added: Initial SQL migrations were configured (server/migrations/001_initial_schema.sql).

2. Core Authentication System Setup

Timestamp & Hash: 2026-05-24 (6be62fa, b0031ea, 0ebda1a)

Commit Message / Branch: Merge pull request #8 from tomatofrog1/harley (Auth implementations)

Detailed Edits:

Added: Created the userProfile.model.js and user.service.js to manage secure user authentication records.

Changed (Backend): Built out the auth.service.js and auth.controller.js to generate JWT tokens and validate user credentials.

Changed (Frontend): Heavily refactored Login.tsx (over 200 lines edited) to connect to the real backend auth endpoints.

Changed (Frontend): Updated AuthContext.tsx to globally manage the authenticated user's state session across the app.

3. Account Types & Directory Overhaul

Timestamp & Hash: 2026-05-25 (2dc01c2)

Commit Message: Merge pull request #9 from tomatofrog1/aaron

Detailed Edits:

Added: Created a new module for managing Account Types (account.controller.js, account.model.js, account.service.js, account.routes.js).

Changed: Restructured the Directory.tsx page (over 500 lines edited) to properly read, display, and filter by these new database-driven Account Types.

4. Dashboard Visualizations (Pie Charts)

Timestamp & Hash: 2026-05-26 (d41972a)

Commit Message: added pie chart of active/offboarding employees

Detailed Edits:

Added: Injected 75 lines of code into src/pages/Dashboard.tsx to render a dynamic pie chart that visualizes the ratio of active employees versus those currently offboarding.

5. Dynamic System Settings

Timestamp & Hash: 2026-05-26 (a455512 & Merge dcefbaa)

Commit Message: made settings dynamic

Detailed Edits:

Added: Built a fully dynamic settings engine on the backend (settings.controller.js, settings.model.js, settings.service.js) and seeded it via sql/auth_setup.sql.

Changed: Expanded src/pages/Settings.tsx massively (over 450 lines edited) to allow administrators to read and update these dynamic configurations directly from the UI.

6. The Archive Feature

Timestamp & Hash: 2026-05-26 (3a6812b)

Commit Message: added archive feature

Detailed Edits:

Changed: Modified employee.model.js to support soft-deletions (archiving) rather than hard-deleting records from the database.

Changed: Tweaked Directory.tsx and EmployeeProfile.tsx to handle the UI state for archived versus active employees.

[v0.1] - Initial Setup & Foundation (2026-05-20 to 2026-05-21)

This version establishes the foundational frontend (React/Vite) and backend architectures, basic routing, UI themes, and initial database connections.

1. Initial Repository Setup

Timestamp & Hash: 2026-05-20 (4664131)

Commit Message: (Initial Commit)

Detailed Edits:

Added: Initialized the entire monorepo structure.

Added: Created core frontend pages including Dashboard.tsx, Directory.tsx, EmployeeProfile.tsx, Login.tsx, Settings.tsx, and UserManagement.tsx.

Added: Set up core configuration files (vite.config.ts, tsconfig.json).

Added: Implemented foundational API service layers (api.js, authService.js, employeeService.js) to prepare for backend communication.

2. Login UI Cleanup

Timestamp & Hash: 2026-05-21 (416c81f & Merge e03e3fc)

Commit Message / Branch: removed demo button (PR #1 from tomatofrog1/railey)

Detailed Edits:

Removed: Deleted 9 lines of code in src/pages/Login.tsx to remove a hardcoded "demo" login button that bypassed authentication.

3. Employee Audit Logs UI

Timestamp & Hash: 2026-05-21 (57c5368 & Merge 06dd1b9)

Commit Message / Branch: employee profile audit log section (PR #2 from tomatofrog1/aaron)

Detailed Edits:

Added: Injected 54 lines of code into src/pages/EmployeeProfile.tsx to create the visual layout and table structure for the employee audit log history section.

4. Global Theming

Timestamp & Hash: 2026-05-21 (9993a86 & Merge 42e8431)

Commit Message / Branch: color themes (PR #3 from tomatofrog1/lans)

Detailed Edits:

Added: Added 8 lines of global CSS variables into src/index.css to define the base color themes and palettes for the application components.

5. Backend Integration & Dynamic Data

Timestamp & Hash: 2026-05-21 (77fed19 & Merge 94bec43)

Commit Message / Branch: auto change lms account, added input... (PR #4 from tomatofrog1/harley)

Detailed Edits:

Changed (Backend): Restructured the employee.model.js database model to separate the monolithic "Name" field into discrete firstName and lastName fields. Updated employee.validator.js to enforce this.

Changed (Frontend): Heavily modified Dashboard.tsx (over 200 lines edited) to strip out static placeholder data and hook the metrics (like personnel per site) up to the live backend API.

Added: Form inputs in EmployeeProfile.tsx (over 800 lines edited) were wired up to allow actual record updates against the backend via employee.service.js.

Added: The Audit History table was hooked up to the auditLog.model.js to pull and display real audit events.

6. Supabase Integration

Timestamp & Hash: 2026-05-21 (3c7c1c2)

Commit Message: add supabase

Detailed Edits:

Added: Installed Supabase client dependencies in package.json.

Added: Created src/lib/supabase.ts to instantiate the core database connection client.

Added: Injected extensive Supabase .agents skill documentation (over 2,000 lines) containing Postgres best practices, indexing rules, and RLS security guidelines for future AI/agent development.
